

Mixed raster content separates a scanned page into three layers.
The stencil records where ink is, at the resolution of the scan.
A small foreground image carries the colour of that ink, and is
drawn through the stencil so its low resolution never shows.
The background carries the paper, inpainted from paper pixels only,
which is why the text leaves no ghost behind it in the output.
Quick brown foxes jump over the lazy dog, seventeen times daily.
Numerals: 0123456789. Punctuation: ,.;!/? and (parentheses) too.
The window for the local threshold comes from the page itself,
measured as the median height of its own connected components.
A photograph is not text and must never enter a one-bit mask;

ne
